

ABSTRACT

A polymer composition containing a specific silyl group-containing polymer, in which the maximum size of particles contained therein is 2 μm or less, and the number of particles having 5 a size of 0.2 μm to 2 μm is 1,000 particles/ml or less. The composition may further contain a specific compound or at least one component selected from an organosilane represented by $(\text{R}^1)_n\text{Si}(\text{X})_{4-n}$, a hydrolyzate of the organosilane and a condensate of the organosilane. The composition is excellent in storage 10 stability, high in hardness and excellent in mechanical strength such as wear resistance, so that a coating film having good taking-up properties even when no lubricant is contained, extremely smooth and having no difference in film thickness can be formed.
